UKraine2UK

Ensuring speedier integration into society

We envisage UKraine2UK being an app that incorporates pre-existing language tools to help signpost useful resources and organisations that can help. This is a cheaper and easier solution that will still facilitate the integration of Ukrainian refugees coming to the UK.

Document Assist via Google Lens
- Visa applications
- Opening bank account
- Healthcare forms
- Housing documents

Signposting useful resources
- Latest UK government policy
- Job placements
- Local councils to help with school placements
- Welfare benefits
- Language-learning opportunities

Locating nearby organisations via Google Maps
- Foodbanks
- Pro bono legal clinics
- Places of worship
- Community centres

App basic UX
- Can auto-detect the user language
- Can then use Google Translate API to convert the app text to the user language
- Can detect location
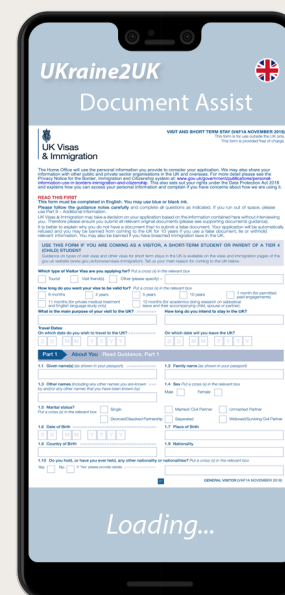

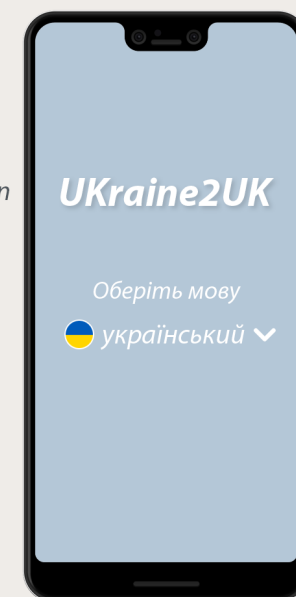

Google API points
- Image augmentation (capturing images & detecting text)
- Auto-translation of text-text, speech-text, text-speech, speech-speech
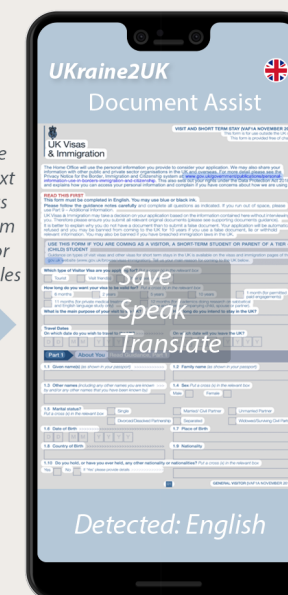

Other points
- Market app via QR code that redirects to app store
- QR code can be easily distributed on flyers at border crossing points, visa application locations, charities and via various social media platforms
- 82% of mobile OS market share in Ukraine is Android
- Resources and organisations can be updated via an online form
- This app will help to signpost the many organisations providing valuable help to refugees
